

Suggestions Before Microblading / Tattoo Powder Brow Procedures

Please avoid the following before your procedure:

- 24 hours before your procedure alcohol, caffeine, pain relievers, fish oil, niacin, and vitamin E (Do not discontinue any medication before consulting your doctor)
- Do NOT work out the day of the procedure
- Any waxing should be performed at least 48 hours prior
- Electrolysis no less than five days before the procedure
- Eyebrow tinting should not be undertaken for two weeks prior
- Skin must be tan free or pigment might discolor or not retain
- Off Retin-A or Retinols for 1 month prior and 1 month after appointment
- No chemical peels 60 days before or 60 days after (brows will peel quicker due to chemicals traveling under the skin)
- Off Accutane for 1 year
- Botox should be done 3 months prior or 1 month after appointment

Permanent makeup is NOT recommended for any clients who are or have:

- Pregnant or breast feeding
- Diabetic (consult your doctor)
- Undergoing chemotherapy (consult your doctor)
- Viral infections and/or diseases
- Epilepsy (consult your doctor)
- A pacemaker or major heart problems (consult your doctor)
- Had an organ transplant (consult your doctor)
- Skin irritations or psoriasis near the treated area (rashes, sunburn, acne, etc.)
- Sick (cold, flu, etc.)
- Had Botox in the past 2 months
- Used Accutane in the past year

What to Expect after the procedure:

Immediately after treatment, the color will appear darker than it will eventually be. This is because the pigment takes around seven days to enter the deeper layers of the skin. After 7-10 days, exfoliation takes place. The top layer of the skin peels off, leaving a softer, lighter color below. The result is a natural looking enhancement. As the treated area is settling down, itching may occur. This is a good sign as it means the skin is healing.

Eyebrow After-Care:

Just a side note: I aim for perfection but everyone's skin is different and will react differently to the procedure. Some skin will heal faster than others, some skin will retain the pigment longer. All skin is aging, some of us will be harder on our skin than others; swimming, tanning and weather all have a negative effect on our skin. Our goal is to make them match as closely as possible, but nature does play a role in the contour of our brows.

- Do not get the brows wet during the healing process for 14 days.
- Do not put anything (water, make-up, lotions etc.) on the brows for 14 days.
- Do not sweat for 14 days - this is a hard one, but body heat expands the pores. Sweat has salt and will prematurely fade, blur or cause the pigment not to take at all.
- Do not scrub, rub or pick at the epithelial crust that forms. Allow it to flake off by itself. If it is removed before it is ready the pigment underneath it can be pulled out.
- Stay out of the sun for two weeks. Then be sure to use sunblock on the healed brow to prevent fading.
- Do not use any Retin-A or Glycolic Acids in the brow area during or after healing.
- Do not use a tanning bed for a month ... preferably, never!

FAILURE TO FOLLOW AFTER-CARE INSTRUCTIONS MAY RESULT IN INFECTIONS, PIGMENT LOSS OR DISCOLORATION. I want you to be thrilled with the results for the months ahead, so please follow the instructions!
