

Suggestions Before Tattoo Removal Procedure

Please avoid the following before your procedure:

- 24 hours before your procedure alcohol, caffeine, pain relievers, fish oil, niacin, and vitamin E (Do not discontinue any medication before consulting your doctor)
- Do NOT work out the day of the procedure
- Any waxing should be performed at least 48 hours prior
- Electrolysis no less than five days before the procedure
- Eyebrow tinting should not be undertaken for two weeks prior
- Off Retin-A or Retinols for 1 month prior and 1 month after appointment
- No chemical peels 60 days before or 60 days after (brows will peel quicker due to chemicals traveling under the skin)
- Off Accutane for 1 year

Tattoo Removal is NOT recommended for any clients who are or have:

- Pregnant or breast feeding
- Diabetic (consult your doctor)
- Undergoing chemotherapy (consult your doctor)
- Viral infections and/or diseases
- Epilepsy (consult your doctor)
- A pacemaker or major heart problems (consult your doctor)
- Had an organ transplant (consult your doctor)
- Skin irritations or psoriasis near the treated area (rashes, sunburn, acne, etc.)
- Sick (cold, flu, etc.)
- Used Accutane in the past year
- Have dark skin tone (FITZ V and VI)

What to Expect after the procedure:

Saline removal is the goal to create a superficial controlled scab. It is the body's natural healing process that removes or lightens the pigment when the scab falls off. Area being treated will be red and bloody from pulling out the pigment. It will then turn into a scab and fall off around 4-12 days. As the treated area is settling down, itching may occur. This is a good sign as it means the skin is healing.

Removal after care:

Side note: it is critical to follow all aftercare instructions to prevent complications, scarring and to achieve optimum results.

- Keep area clean and open to the air. Do not cover with anything. Do not touch the area, if you need to make sure your hands are exceptionally clean.
- Keep area out of the water until healed.
- No bathing, swimming, saunas, hot tubs, tanning, or intense exercise.
- Do not disrupt the scabbing process (i.e. no picking, scratching, etc.)
- Once all scabbing has naturally fallen off, apply one drop of Vitamin E Oil (provided) 4 times every other day for a minimum of 4 weeks, or until next session.
- Removal/lightening unwanted pigment is a long process and patience is required. Please be patient and give the process a fair chance to work. Expect visible and wanted results in 3-6 sessions. How many sessions needed will depend on how saturated the pigment is, how deep it was implanted, and how much needs to be removed for the desired result. In some cases, only the areas that fall out of the desired shape need to be removed and the pigment inside the desired shape can be color corrected.

FAILURE TO FOLLOW AFTER-CARE INSTRUCTIONS MAY RESULT IN INFECTION
