COSMETIC TATTOOING AFTER CARE AND INFORMATION

Just a side note: I aim for perfection, but everyone's skin is different and will react differently to the procedure of permanent eyeliner. Some skin will heal faster than others, some skin will retain the pigment longer. All skin is aging, some of us will be harder on our skin than others; swimming, tanning, and weather all have a negative effect on our skin.

- (MOST IMPORTANT!) For the first day every hour after the procedure wipe very gently with a cotton pad dipped in distilled water and then apply a dab of cream (a very thin layer) with the micro brush supplied. From day 2 through day 5 dab a very thin layer of cream 3-4 times a day (do not use the distilled water after the first day). Never rush the healing process. Do not scrub, rub or pick at the epithelial crust that forms. Allow it to flake off by itself. If it is removed before it is ready the pigment underneath it can be pulled out.
- Do not get the eyeliner wet (the exception is wiping with the distilled water the first day) during the healing process for 5 days.
- Do not put anything (water, make-up, lotions etc.) but the distilled water and cream as described above for 5 days or until healed.
- Do not sweat for 5 days – this is a hard one, but body heat expands the pores. Sweat has salt and will prematurely fade, blur, or cause the pigment not to take at all
- Stay out of the sun for two weeks.
- Do not use any Retin-A or glycolic acids in the area during or after healing.
- Only touch the treated areas with squeaky-clean hands during the healing process.

FAILURE TO FOLLOW AFTER-CARE INSTRUCTIONS MAY
RESULT IN INFECTIONS, PIGMENT LOSS OR DISCOLORATION.
